the Aalberts advantage

Aalberts is a key partner in modern data centre infrastructure, offering an end-to-end approach from precision components to prefabricated solutions.

When you work with Aalberts, you get more than just physical products. You gain a collaborative partner with global expertise and a deep understanding of data centre operations, with decades of expertise in integrated piping systems and hydronic flow control.

how we customise solutions for your project?

- transparent pricing for cost certainty
- integrated design support including Revit/ BIM
- commissioning guidance and technical training
- fully compliant and FAT tested
- complete technical documentation
- dependable supply through regional partnerships
- rapid installation via prefab and advanced jointing technology
- engineered for uptime and operation efficiency
- ongoing service and support post-installation

uptime & build speed

Aalberts' mission critical technologies ensure continuous and uninterrupted operations through tested solutions, prefabrication and technical knowledge, supported by our service teams.

cost saving

Ensure certainty and accelerate your build schedule. Make savings through significant reduction in speed of build and programme duration; labour efficiency, and faster commissioning. All with transparent pricing and fixed costs, once a design is agreed.

energy efficiency

Advanced thermal management systems ensure optimal operating temperature and reduce energy consumption through balanced systems, using optimised pressure maintenance and air and dirt removal, for efficient system flow.

sustainability

Reduce your data centre's environmental footprint using responsible technology. Over the course of a system's lifespan, our energy saving solutions will have a positive influence on carbon impact, contributing to key elements of climate-neutral commitments.

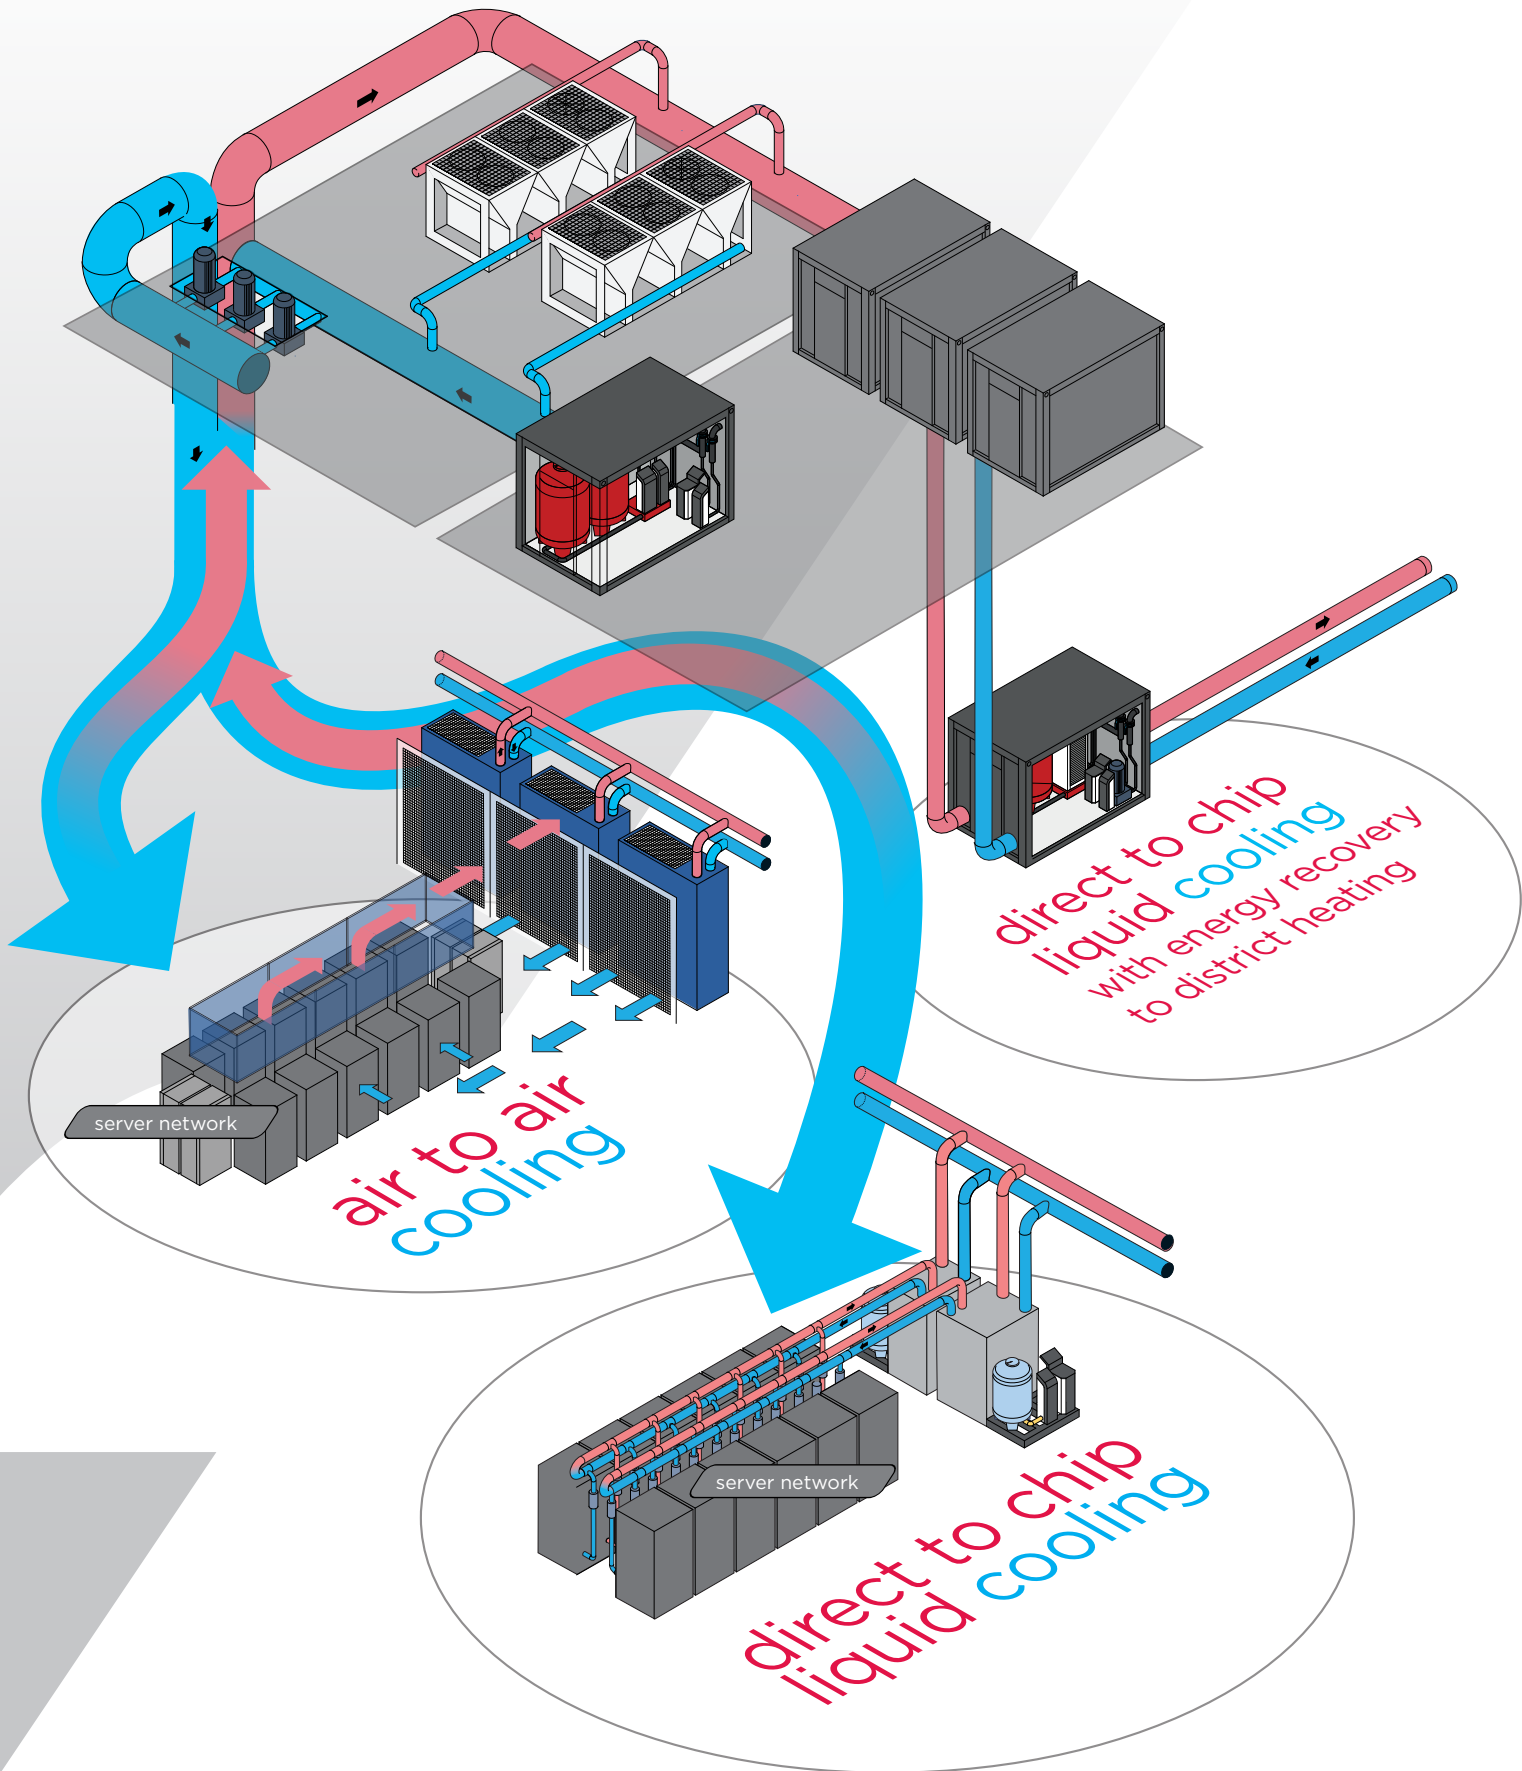

end-to-end support

We're with you throughout the project, from design services and providing full documentation, to technical support. Benefit from a single point of contact for warranty support and if needed, we can send an expert to help on site.

seamless simplicity

Tailored and customised solutions are not a barrier to integration - quite the opposite. Benefit from ease of installation, integration into the wider system, and a smoother and quicker commissioning process.

solutions made seamless

from the plant room and network distribution to the servers,
we provide a complete solution

Aalberts data centre solutions tailored to you

challenges

- limited space
- engineering hurdles
- accelerated schedules
- high risks
- personnel shortages
- high energy costs
- high energy usage
- reliable supply chain

our solutions

- mission critical technologies
- tailor made solutions
- product assurance
- technical and design support
- one-stop engineering
- prefabrication
- sustainability certifications
- built to last

the results

- customer satisfaction
- reduced risks
- increased longevity
- reduced downtime
- customised solutions
- energy efficiency
- a single, trusted partner
- accelerated installations

We operate from various regions around the globe: America, EMEA and APAC. As we have multiple locations in many countries, we are always close to our customers. More than 3500 mission critical employees are persistent to offer the best seamless data centre solutions.
